	Index	15

The `dns_ovh` plugin automates the process of completing a `dns-01` challenge ([DNS01](#)) by creating, and subsequently removing, TXT records using the OVH API.

CHAPTER 1

Named Arguments

<code>--dns-ovh-credentials</code>	OVH <i>credentials</i> INI file. (Required)
<code>--dns-ovh-propagation</code>	The number of seconds to wait for DNS to propagate before asking the ACME server to verify the DNS record. (Default: 30)

warning will be emitted each time Certbot uses the credentials file, including for renewal, and cannot be silenced except by addressing the issue (e.g., by using a command like `chmod 600` to restrict access to the file).

Examples

Listing 1: To acquire a certificate for `example.com`

```
certbot certonly \  
  --dns-ovh \  
  --dns-ovh-credentials ~/.secrets/certbot/ohv.ini \  
  -d example.com
```

Listing 2: To acquire a single certificate for both `example.com` and `www.example.com`

```
certbot certonly \  
  --dns-ovh \  
  --dns-ovh-credentials ~/.secrets/certbot/ovh.ini \  
  -d example.com \  
  -d www.example.com
```

Listing 3: To acquire a certificate for `example.com`, waiting 60 seconds for DNS propagation

```
certbot certonly \  
  --dns-ovh \  
  --dns-ovh-credentials ~/.secrets/certbot/ovh.ini \  
  --dns-ovh-propagation-seconds 60 \  
  -d example.com
```

CHAPTER 4

API Documentation

Certbot plugins implement the Certbot plugins API, and do not otherwise have an external API.

CHAPTER 5

Indices and tables
